

Subject index

- anthropometry**, child, growth standards, deprivation, 157
anthropometry, neonates, umbilical cord position, 167
assessment of fetal well-being, intra-uterine growth retardation, fetal heart rate monitoring, computer CTG, fetal movements, flow velocity wave form, 195
auditory brainstem evoked responses (ABR), auditory evoked responses, neonatal, preterm infants, middle latency auditory evoked responses (MLR), auditory cortical evoked responses (ACR), 113
auditory cortical evoked responses (ACR), auditory evoked responses, neonatal, preterm infants, auditory brainstem evoked responses (ABR), middle latency auditory evoked responses (MLR), 113
auditory evoked responses, neonatal, preterm infants, auditory brainstem evoked responses (ABR), middle latency auditory evoked responses (MLR), auditory cortical evoked responses (ACR), 113
barotrauma, high frequency ventilation, low inspired humidity, newborn, lambs, squamous metaplasia, scanning electron microscopy, light microscopy, 53
birth order, intelligence tests, child development, infant feeding, maternal age, 181
birth weight, pregnancy, type-1 diabetes mellitus, early growth delay, fetal behavioral states, 91
blood pressure, low birthweight, 209
blood pressure, preterm, chronic lung disease, neonate, 149
breastfeeding guidance, maternity ward, rooming-in, Mexico, 25
cardiorespiratory, heart rate variability, respiratory sinus arrhythmia, neonate, spectral analysis, 217
cerebrovascular circulation, small for gestational age, velocimetry, intrauterine growth retardation, 171
child development, intelligence tests, infant feeding, birth order, maternal age, 181
child, anthropometry, growth standards, deprivation, 157
chronic lung disease, preterm, blood pressure, neonate, 149
cocaine, developmental injury, prenatal cocaine exposure, in utero cocaine exposure, 1
computer CTG, intra-uterine growth retardation, fetal heart rate monitoring, fetal movements, flow velocity wave form, assessment of fetal well-being, 195
deprivation, anthropometry, child, growth standards, 157
development, stomach, parietal cells, G-cells, fetus, 163
developmental injury, cocaine, prenatal cocaine exposure, in utero cocaine exposure, 1
disclosure, informed consent, mechanical ventilation, 67
early growth delay, pregnancy, type-1 diabetes mellitus, fetal behavioral states, birth weight, 91
essential fatty acid, infant, formula, plasma, phospholipid, 41
essential fatty acids, phospholipids, human fetal tissue, first trimester of pregnancy, mother, plasma, red blood cells, 97
fetal behavioral states, pregnancy, type-1 diabetes mellitus, early growth delay, birth weight, 91
fetal heart rate monitoring, intra-uterine growth retardation, computer CTG, fetal movements, flow velocity wave form, assessment of fetal well-being, 195
fetal movements, intra-uterine growth retardation, fetal heart rate monitoring, computer CTG, flow velocity wave form, assessment of fetal well-being, 195
etus, stomach, development, parietal cells, G-cells, 163
first trimester of pregnancy, essential fatty acids, phospholipids, human fetal tissue, mother, plasma, red blood cells, 97
flow velocity wave form, intra-uterine growth retardation, fetal heart rate monitoring, computer CTG, fetal movements, assessment of fetal well-being, 195
formula, infant, plasma, phospholipid, essential fatty acid, 41
G-cells, stomach, development, parietal cells, fetus, 163
growth standards, anthropometry, child, deprivation, 157

- heart rate variability**, respiratory sinus arrhythmia, cardiorespiratory, neonate, spectral analysis, 217
- high frequency ventilation**, low inspired humidity, barotrauma, newborn, lambs, squamous metaplasia, scanning electron microscopy, light microscopy, 53
- human fetal tissue**, essential fatty acids, phospholipids, first trimester of pregnancy, mother, plasma, red blood cells, 97
- in utero cocaine exposure**, cocaine, developmental injury, prenatal cocaine exposure, 1
- infant feeding**, intelligence tests, child development, birth order, maternal age, 181
- infant**, formula, plasma, phospholipid, essential fatty acid, 41
- informed consent**, disclosure, mechanical ventilation, 67
- intelligence tests**, child development, infant feeding, birth order, maternal age, 181
- intra-uterine growth retardation**, fetal heart rate monitoring, computer CTG, fetal movements, flow velocity wave form, assessment of fetal well-being, 195
- intrauterine growth retardation**, small for gestational age, velocimetry, cerebrovascular circulation, 171
- lambs**, high frequency ventilation, low inspired humidity, barotrauma, newborn, squamous metaplasia, scanning electron microscopy, light microscopy, 53
- light microscopy**, high frequency ventilation, low inspired humidity, barotrauma, newborn, lambs, squamous metaplasia, scanning electron microscopy, 53
- low birthweight**, blood pressure, 209
- low inspired humidity**, high frequency ventilation, barotrauma, newborn, lambs, squamous metaplasia, scanning electron microscopy, light microscopy, 53
- maternal age**, intelligence tests, child development, infant feeding, birth order, 181
- maternity ward**, rooming-in, breastfeeding guidance, Mexico, 25
- mechanical ventilation**, disclosure, informed consent, 67
- Mexico**, maternity ward, rooming-in, breastfeeding guidance, 25
- middle latency auditory evoked responses (MLR)**, auditory evoked responses, neonatal, preterm infants, auditory brainstem evoked responses (ABR), auditory cortical evoked responses (ACR), 113
- mother**, essential fatty acids, phospholipids, human fetal tissue, first trimester of pregnancy, plasma, red blood cells, 97
- neonatal cerebral ultrasound**, VLBW, obstetrical and neonatal optimality, neonatal neurology, neurodevelopmental outcome, 131
- neonatal neurology**, VLBW, obstetrical and neonatal optimality, neonatal cerebral ultrasound, neurodevelopmental outcome, 131
- neonatal**, auditory evoked responses, preterm infants, auditory brainstem evoked responses (ABR), middle latency auditory evoked responses (MLR), auditory cortical evoked responses (ACR), 113
- neonate**, heart rate variability, respiratory sinus arrhythmia, cardiorespiratory, spectral analysis, 217
- neonate**, preterm, blood pressure, chronic lung disease, 149
- neonates**, anthropometry, umbilical cord position, 167
- neurodevelopmental outcome**, VLBW, obstetrical and neonatal optimality, neonatal neurology, neonatal cerebral ultrasound, 131
- newborn**, high frequency ventilation, low inspired humidity, barotrauma, lambs, squamous metaplasia, scanning electron microscopy, light microscopy, 53
- obstetrical and neonatal optimality**, VLBW, neonatal neurology, neonatal cerebral ultrasound, neurodevelopmental outcome, 131
- parietal cells**, stomach, development, G-cells, fetus, 163
- phospholipid**, infant, formula, plasma, essential fatty acid, 41
- phospholipids**, essential fatty acids, human fetal tissue, first trimester of pregnancy, mother, plasma, red blood cells, 97
- plasma**, essential fatty acids, phospholipids, human fetal tissue, first trimester of pregnancy, mother, red blood cells, 97
- plasma**, infant, formula, phospholipid, essential fatty acid, 41
- pregnancy**, type-1 diabetes mellitus, early growth delay, fetal behavioral states, birth weight, 91
- prenatal cocaine exposure**, cocaine, developmental injury, in utero cocaine exposure, 1
- preterm infants**, auditory evoked responses, neonatal, auditory brainstem evoked responses (ABR), middle latency auditory evoked responses (MLR), auditory cortical evoked responses (ACR), 113
- preterm**, blood pressure, chronic lung disease, neonate, 149

red blood cells, essential fatty acids, phospholipids, human fetal tissue, first trimester of pregnancy, mother, plasma, 97

respiratory sinus arrhythmia, heart rate variability, cardiorespiratory, neonate, spectral analysis, 217

rooming-in, maternity ward, breastfeeding guidance, Mexico, 25

scanning electron microscopy, high frequency ventilation, low inspired humidity, barotrauma, newborn, lambs, squamous metaplasia, light microscopy, 53

small for gestational age, velocimetry, cerebrovascular circulation, intrauterine growth retardation, 171

spectral analysis, heart rate variability, respiratory sinus arrhythmia, cardiorespiratory, neonate, 217

squamous metaplasia, high frequency ventilation, low inspired humidity, barotrauma, newborn, lambs, scanning electron microscopy, light microscopy, 53

stomach, development, parietal cells, G-cells, fetus, 163

type-1 diabetes mellitus, pregnancy, early growth delay, fetal behavioral states, birth weight, 91

umbilical cord position, neonates, anthropometry, 167

velocimetry, small for gestational age, cerebrovascular circulation, intrauterine growth retardation, 171

VLBW, obstetrical and neonatal optimality, neonatal neurology, neonatal cerebral ultrasound, neurodevelopmental outcome, 131
